

e-Use™ Energy Usage Analysis

The most important step in reducing your energy cost is to understand where that energy is being consumed. With an e-Use™ Energy Usage Analysis, you can get the information to direct where your investments and business practice changes would have the most impact.

Your energy needs are unique to the business or institution you operate. The e-Use™ Energy Usage Analysis looks at both your specific process and the facility that supports it to determine where you are using your energy and where that usage can be effectively decreased, reducing your environmental footprint and recurring operating cost.

With an e-Use™ Energy Usage Analysis, you can begin to control your energy consumption in a meaningful way to determine:

- What changes will yield significant results,
- What changes are practical and
- What savings you can expect from making those changes.

The e-Use™ Analysis provides:

- Identification of opportunities and their relative importance for reducing energy requirements
- Immediately Actionable Energy savings recommendations
- Framework for longer term feasibility/design and procurement specifications
- Identification of Public Relations opportunities with customers
- Identification of opportunities that promote employee retention and hiring - employees want to work for eco-friendly organizations
